

Global Swiss bank connects mainframe to fraud detection systems using Adaptive Integration Fabric

A Swiss financial services company, wealth manager, and global investment bank with business divisions in over 50 countries needed a way to quickly and securely connect their core systems to a third-party database with very low latency in order to fulfill KYC due diligence in real time.

Challenge

Due to its legacy infrastructure, the banking giant needed a way to rapidly create uniform SOAP and REST APIs that would be called from a variety of programs, including their mainframe PL/I z/OS-based business logic applications.

Additionally, executives needed this challenge addressed as soon as possible. The integration solution had to be up and running quickly, and there was little time for their engineers to write new APIs or PL/I code. This API platform had to interface with a wide range of banking technology, such as 3270 screens and legacy programs to hybrid-cloud mobile applications.

Client

Global Banking Institution headquartered in Switzerland

Industry

Banking & Financial Services

Challenge

How can core technology connect to modern applications for KYC due diligence in real time with low latency?

Solution

Adaptigent's Adaptive Integration Fabric

Solution

When the banking giant reached out to Adaptigent™ to conduct a Proof of Concept (POC), they wanted to see the capabilities of Adaptigent's no code modernization solution, the Adaptive Integration Fabric, first-hand.

Lasting only a week, the firm was able to create Smart APIs that called out to Refinitiv's World-Check database and fulfilled KYC due diligence. They were convinced the Fabric was the only solution that could accomplish what they needed.

Using the Fabric, the bank is able to:

- Design, test and rapidly deploy APIs with little to no coding.
- Import Swagger (OpenAPI) documents that map the interface from third party services into the Fabric to create and verify additional APIs.
- Create a workflow that defines the logic needed for the required input/output to new APIs.
- Reduce latency by consolidating multiple round trips usually required in calling legacy systems to Smart APIs.
- Generate required REST APIs that are securely called by external mobile, web, and other applications.
- Create the essential PL/I mainframe components for all interfaces into existing transactions in order to call out to fraud detection services.
- Quickly check APIs for errors.

Results

Using the Adaptive Integration Fabric, this global financial services institution securely connected their mainframe and mobile applications to fraud detection services with little or no coding needed. Thanks to the Fabric's Smart APIs, the bank's legacy system will stay securely connected to fraud detection services regardless of what changes are made to the applications or infrastructure in the future.

The Adaptive Integration Fabric creates a powerful orchestration layer that easily accesses data trapped on core systems.

Adaptigent empowers organizations to unlock the potential of their core systems to enable enterprise-level innovation. The company's products, led by the Adaptive Integration Fabric, help IT organizations provide real-time, business-ready results by creating a dynamic, no-code layer that allows modern applications to access the full treasure trove of data trapped on legacy systems. Built on a 35+ year history of digital transformation expertise, it is trusted by many of the world's largest companies — Credit Suisse, AXA, Lockheed Martin and Caterpillar — to accelerate their IT modernization efforts.
