

Adaptigent™ Adaptive Integration Fabric

The legacy to anywhere platform that allows organizations to connect mission-critical data and transactions with the modern world.

Your Legacy Crisis

When it comes to legacy systems, accessing data and applications can be time-consuming and costly. Your business demands real-time turnaround, but IT must adapt intelligently and respond in a way that is sustainable, while still moving at the speed of business.

The Future of Your Mainframe

We live in a complex world, and our IT systems reflect that complexity. After years or even decades of evolution, market changes, technology shifts, and mergers & acquisitions, CIOs have been left with a level of system complexity that is often untenable. This complexity not only ties up a huge portion of IT budgets, but it leaves IT organizations struggling to support the real-time needs of the business.

No one can eliminate this complexity overnight, but Adaptigent's Adaptive Integration Fabric can shield your business from the intricacies of your mission critical data sources, allowing you to unlock the full potential of the most secure, stable and data rich legacy systems forming the backbone of your organization.

Without writing a single line of code, non-programmers can **rapidly develop sophisticated interfaces to highly complex legacy platforms** without in-depth technical knowledge of the applications and data sources they are accessing.

Empowering the adaptive, intelligent enterprise™

Adaptigent is the only legacy integration & modernization platform that gives you access to critical data and transactions without writing a single line of code. Adaptive Integration Fabric provides:

- **Visual, truly no-code environment**
- **Bi-directional Communication**
- **Orchestration of Business Logic**
- **Extension of Mainframe Applications**
- **Build Sophisticated APIs in a Fraction of the Time**

With Adaptigent's Adaptive Integration Fabric, inbound and outbound integrations can be put into production in days or weeks versus months or years, and in a no-code manner that reduces risks to your mission critical run-time systems.

Inbound Integrations

With Adaptive Integration Fabric, you can rapidly and cost-effectively create REST or SOAP interfaces to your existing mainframe applications using a visual, drag-and-drop, no-code interface and an intelligent orchestration engine, which shields modern applications from having to know anything about how the mainframe applications work.

Outbound Integrations

Adaptive Integration Fabric can generate compact, self-contained COBOL or PL/1 subroutines to make outbound calls to REST interfaces. This shields legacy developers from having to learn unfamiliar technologies and speeds time-to-value.

Extending Mainframe Applications

Using Adaptigent's Adaptive Integration Fabric, you can create extensions to your existing COBOL and/or PL/1 applications using modern programming languages and platforms with only minimally invasive changes to your existing applications. This gives you all the benefits of modern platforms while reducing the risk of making changes to older legacy applications.

That's why the world's largest companies use Adaptigent to take the burden out of leveraging legacy applications and mission-critical data.

Game-changing Architecture

- **Speed Time to Market.** Reduce initial development time up to 80%.
- **Reduce TCO.** Lower integration maintenance costs by 50%.
- **No-code Platform.** Non-programmers can rapidly create sophisticated interfaces.

“We were able to go from POC to production in under two months with Adaptigent's Adaptive Integration Fabric.”

- IT Executive at Global Bank

Adaptigent™ empowers organizations to unlock the potential of their core systems to enable enterprise-level innovation. The company's products, led by the Adaptive Integration Fabric, help IT organizations provide real-time, business-ready results by creating a dynamic, no-code layer that allows modern applications to access the full treasure trove of data trapped on legacy systems. Built on a 35+ year history of digital transformation expertise, it is trusted by many of the world's largest companies — Credit Suisse, Nationwide Insurance, Lockheed Martin and Caterpillar — to accelerate their digital transformation efforts.
