

ASSIST/TS

Delivering screen and field-level help screens to 3270 applications without new code or code changes.

Adaptigent's ASSIST/TS presents a revolutionary approach for enterprises looking to enhance their 3270 applications with comprehensive screen or field-level help screens. This innovative solution eliminates the need for generating new code or implementing code modifications, streamlining the integration process for businesses.

ASSIST/TS Package Functionality

ASSIST/TS provides SQL results from DB2 in a window display. This feature allows access to DB2 data directly from CICS, without any programming changes to existing applications.

ASSIST/TS help displays are created in a similar fashion as window help displays. By pressing the help attachment function key, a query can be created for any screen location. The user then enters an SQL query and ASSIST/TS displays the results.

The ASSIST Web Help feature allows end users to display ASSIST/TS library members from a browser, rather than a green screen. ASSIST Web Help receives a help request (Window, Panel, Manual, Query or System) via HTTP from any application. It then retrieves the help/reference information from ASSIST/TS and presents it in a separate browser window.

ASSIST/TS Features:

WEB HELP INTEGRATION

ASSIST Web Help transforms ASSIST/TS help documentation into HTML pages, moving away from traditional green screens to pop-up help displays in a new browser window, enhancing the user experience with modern accessibility.

DOCUMENTATION AND USER SUPPORT

ASSIST/TS offers soft-copy manuals directly to end-users, simplifying access to important documentation. ASSIST/TS enhances navigation by creating menus of help screens, listing available online manuals or reference panels, thereby streamlining user access to necessary resources.

ENHANCED DATA ACCESS

ASSIST/TS enables the creation of electronic documentation systems by facilitating the presentation of DB2 data to 3270 terminals through SQL SELECT statements. This feature underscores the solution's versatility and superior integration capabilities, allowing for a seamless blend of traditional data access methods with modern documentation strategies.

USER EMPOWERMENT AND SYSTEM ANTICIPATION

ASSIST/TS significantly empowers end-users by enhancing the accessibility of information. It underlines the necessity for an online referencing system to not only understand the user's current actions but also to proactively anticipate their needs.

ADVANCED FEATURES AND INTEGRATION

ASSIST/TS includes an Interactive Portal, FTP Server Web Help, and an Email Client, allowing for the extension of help screens and online manuals to browsers. It also facilitates the integration of existing help systems with new web applications without the need to alter source code.

Adaptigent is a software technology company offering business solutions to harness the power of APIs for innovation and growth. A global distributor of the Fujitsu NetCOBOL compiler, Adaptigent seamlessly integrates core systems. More than 2,500 organizations globally trust Adaptigent solutions. Visit www.adaptigent.com.
